WX Ultrasonic WeatherStation® Instruments for Land Applications

Delivering a Compact, Affordable Instrument for Informed Decision-Making

Available Models: 110WX, 150WX, 200WX

Whether you are harvesting crops, operating equipment, preparing for bad weather or responding to a hazardous event; understanding the weather is important. The WX Series allows users to make informed decisions based on site specific information, resulting in improved efficiency, reduced risks and overall cost savings. Various model options are available depending on the application and requirements.

The WX Series WeatherStation Instruments offer a truly best-in-class solution at a better price point compared to any other weather monitoring system on the market today!

Features:

- Model 110WX – Measures apparent wind speed and angle, barometric pressure, air temperature, relative humidity, calculated dew point, heat index and wind chill temperature
- Models 150WX and 200WX – Includes all 110WX functionality plus internal compass and GPS (for true wind speed and direction), GPS position, speed over ground, course over ground
- Model 200WX – Best-in-class dynamic stabilization via three-axis compass and three-axis rate gyro
- UV stabilized, compact housing
Product Models to Satisfy Multiple Weather Needs

WeatherCaster™ Software

**Developer Assistance**
- Enable/disable functionality
- Optimize communications bandwidth NMEA 0183 (RS232, RS422)
- Change sampling rate (output interval)

**Field Installation Assistance**
- Enable/disable functionality
- Sensor orientation
- Compass calibration
- Temperature offset
- Select specific device on a NMEA2000® network
- Alarms for wind speed and barometric pressure
- Altitude offset
- More accurate GPS position in 2D mode
- More accurate BP reading
**Wet conditions include moisture, rain, frost, dew, snow, ice and/or sea spray in the wind channel. Wind, temperature, and relative humidity readings will be less accurate.**

**RMS—Root Mean Square**

Communication protocol for the agriculture industry – that is based on the SAE J1939 protocol.

### Certification and Standards:
- IEC60950_1C, IEC60950_22A, EN55022, EN55024, EN15014982

### Mounting Thread Size on Base:
- Standard 1"-14 UNS (3/4" NPT optional)

### Communication Interface:
- NMEA 0183 (RS422 or RS232) and NMEA2000® (CAN bus)

### Weight:
- 300 grams (0.8 lb)

### Supply Voltage:
- 9 VDC to 40 VDC

### Supply Current (@ 12 VDC):
- (<50 mA) <0.6W —110WX
- (<85 mA) <1.0W —150WX
- (<105 mA) <1.25W —200WX

### Weight:
- 300 grams (0.8 lb)

### Communication Interface:
- NMEA 0183 Sentence Structure
- $GPGGA, GPS Datum Reference
- $GPGSV, GPS Fix Data
- $GPGGLL, Geographic Position—Latitude and Longitude
- $GPGGA, GNSS DOP and Active Satellite
- $GPRMC, Satellites in View
- $GPGRMC, Recommended Minimum GNSS
- $GPRMC, COG and SOG
- $GPZDA, Time and Date
- $HCHDG, Heading, Deviation, and Variation
- $HCHDT, True Heading
- $HCTHS, True Heading and Status
- $TIROT, Rate of Turn
- $SWMDA, Meteorological Composite
- $WIMWD, Wind Direction and Speed
- $WIMWX, Wind Speed and Angle
- $WIMWR, Relative Wind Direction and Speed
- $WIMWT, True Wind Direction and Speed
- $YXKDR, Transducer Measurements

### NMEA2000® Output Message Structure
- 59392, ISO Acknowledgement
- 060928, ISO Address Claim
- 126208, Acknowledge Group Function
- 126464, PGN List
- 126992, System Time
- 126996, Product Information
- 126998, Configuration Information
- 127250, Vessel Heading
- 127251, Rate of Turn
- 127257, Attitude
- 127258, Magnetic Variation
- 129025, Position and Rapid Update
- 129026, COG and SOG, Rapid Update
- 129029, GNSS Position Data
- 129033, Time and Date
- 129044, Datum
- 129538, GNSS Control Status
- 129539, GNSS DOPs
- 129540, GNSS Sats in View
- 130306, Wind Data
- 130310, Environmental Parameters
- 130311, Environmental Parameters
- 130312, Temperature
- 130313, Humidity
- 130314, Actual Pressure
- 130323, Meteorological Station Data

### Dimensions

- **WX Series**
  - ø 72 mm (2.83”)
  - 131 mm (5.16”)
  - ø 45 mm

### Part Numbers

- 110WX: 44-820-1-01, RH, NMEA 0183 (RS422) and NMEA2000® (CAN Bus)

RMS—Root Mean Square

*When the wind speed is less than 0.46 MPH and/or air temperature is below 0°C (32°F), wind, temperature, and relative humidity readings will be less accurate.

**Wet conditions include moisture, rain, frost, dew, snow, ice and/or sea spray in the wind channel.

***AirMar has made the address claiming modifications to enable compatibility with the ISO 11783 communication protocol for the agriculture industry – that is based on the SAE J1939 protocol.
Understanding True and Apparent Wind

Virtually all mechanical and ultrasonic anemometers report apparent wind speed and direction. The Airmar WX Series is unique because it calculates both true and apparent wind speed and direction. These wind readings are the same if the unit is mounted in a fixed location. However, if the WX Series is mounted on a moving vehicle, the apparent wind is the wind you would feel on your hand if you held it out the window while going down the highway. Since the WX Series has a built in GPS and compass, it calculates the true wind based upon the apparent wind, speed of the vehicle, and compass heading.

True wind information is significant for numerous applications on hazardous response vehicles. True wind speed and direction is also mission-critical. When en route to an emergency situation, first responders can use the true wind readings to predict wind conditions at the disaster site before they even arrive, giving vital information for planning operations and staging apparatus.

Performing Above and Beyond Competitive Products on the Market

Airmar’s WX Series products are the only all-in-one unit to offer true and apparent wind speeds without additional sensors.

Each WeatherStation Instrument is factory calibrated in a wind tunnel at our state-of-the-art facility located in Milford, New Hampshire, USA.
