

December 1, 2015

Airmar endeavors to be an environmentally responsible company. Therefore, we appreciate the need for environmental controls. We are pleased to provide environmental conformance information regarding the materials used in the production of our products.

Airmar is doing everything reasonably possible to maintain conformance with environmental standards, including the international standards and directives, RoHS (Restriction of Hazardous Substances) Directive, EU Directive 2011/65/EU, and REACH (Registration, Authorization and Restriction of Chemicals), European Union Regulation (EC) 1907/2006. Environmental standards and directives change constantly. We will keep you abreast of changes that affect Airmar products by periodically updating this letter.

Conformance to RoHS

Since 2004, Airmar has worked with our suppliers to produce and ship RoHS compliant products worldwide. Upon request, we will provide RoHS Certificates for purchased products.

Conformance to Ship Recycling Convention

Airmar supports the Hong Kong International Convention for the Safe and Environmentally Sound Recycling of Ships (Ship Recycling Convention) as defined in IMO Resolution MEPC.197(62). Upon request, we will provide Material Declarations for purchased products.

Conformance to REACH

Airmar does not specify or include any of the presently listed SVHC's in our design documentation. Further, to the best of our knowledge, applicable hazardous substances are not present, in excess of REACH specified threshold limits, in the materials that Airmar purchases for the production of our products. This includes all packaging material provided with finished product. To promote and maintain supply chain integrity, we will require our suppliers to provide documentation on the usage of SVHC in their processes and products. Additionally, in an effort to assist our customers, Airmar is undergoing the implementation of controls and data sharing systems to be able to react quickly to the "live" list of substances of very high concern (SVHC), as defined by REACH. We will share findings with our customers as our efforts move forward.

Conflict Minerals

Airmar does not directly source or process any conflict minerals such as Tin, Tantalum, Tungsten or Gold. Conflict minerals are contained in our products in the form of solder or as a component in metal alloys. Airmar has contacted our component suppliers within our supply chain to verify their compliance with Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. Based on the information received thus far we have no indication that Airmar products contain minerals originating from conflict mines or smelters in or around the Democratic Republic of the Congo.

Airmar takes environmental responsibility seriously and assures our customers that we are doing everything reasonably possible to maintain conformance to with environmental standards and directives. However, because we are not the producer of any of the materials contained in our product,

notwithstanding anything to the contrary contained in any document, Airmar shall not be liable, under any theory of law, and shall not be responsible to defend or indemnify any party should any material be out of compliance or conformance with the aforementioned standards and directives. We believe the controls we have in place will help to assure that Airmar's products maintain conformance with environmental standards.
